a What ends a search
← better options left decide
worth decides →
Standard choice (Experiment 1)
Choice process (Experiment 2)
Mean of the two
−0.050 −0.025 0.000 0.025 0.050
Value rule minus share rule, held out log2 probability per selection
b Where a search starts
Standard choice (Experiment 1)
Choice process (Experiment 2)
0.0 0.2 0.4 0.6 0.8 1.0
Place of the first selection in the list (0 top, 1 bottom)
People
Sample until return
Reading in any order blind to the screen
c Choices
Standard choice (Experiment 1)
Choice process (Experiment 2)
Mean of the two
1.0 1.5 2.0 2.5 3.0 3.5 4.0
Likelihood of the choice of a person held out, times chance
Sample until return
CL
DbS
MLBA
d How search time grows (descriptive)
Time of the final selection
Expected looks, sample until return
Standard choice
Choice process
Proportional to the set
Relative to sets of 10
